PHA.06110.02 - C-Both: Construction of production organisms - Hosts and vectors

PHA.06110.02 10 CP

Modulbezeichnung C-Both: Construction of production organisms - Hosts and vectors

Modulcode PHA.06110.02

Semester der erstmaligen Durchführung

Verwendet in Studiengängen / Semestern

- Pharmaceutical and Industrial Biotechnology (MA120 LP) (Master) > Pharmazie PharmaIndusBiotech.MA120, Akkreditierungsfassung gültig ab WS 2019/20 > Pflichtmodule
- Pharmaceutical and Industrial Biotechnology (MA120 LP) (Master) > Pharmazie PharmaIndusBiotech.MA120, Akkreditierungsfassung (WS 2015/16 - SoSe 2023) > Pflichtmodule

Modulverantwortliche/r

Weitere verantwortliche Personen S. Schilling

Teilnahmevoraussetzungen

Kompetenzziele

- Knowledge on synthesis and structure/function relationship of DNA, RNA and protein
- Basic principles of gene structure, regulatory elements, function and regulation of activity in biotechnologically important prokaryotic and eukaryotic organisms
- Theoretical ability to cultivate bacteria, yeasts and phototrophic organisms
- Knowledge about basic principles of gene cloning
- Theoretical ability to construct a genetically modified organism by gene cloning und expression in a final production host
- Insight into molecular techniques of plant and microalgae transformation
- Survey of basic techniques of plant regeneration and concepts of in vitro plant cell, tissue and organ cultures
- Overview of biotechnological application of phototrophic organisms and transgenic plants
- Advantages of bacteria, yeast and insect cells as gene expression systems
- Overview over products of molecular and classic biotechnology of microorganisms
- Practical know-how for transfection and cultivation of microbial cells
- Practical know-how on heterologous gene expression in microorganisms and plants
- Practical knowhow in analyzing genetically modified plants

Modulinhalte Course C-Both.1: Methods and strategies for the generation of production strains

- Overview biotechnologically relevant organisms: product related selection, advantages/disadvantages
- Toolbox biotechnology: Gene analysis, DNA/protein sequencing, detection methods for products
- Strategies for improvement of strains and products: random/site directed mutagenesis, protein tags
- Examples for successful application in pharmaceutical and industrial biotechnology using different production organisms (bacteria, yeast, plants)

Course C-Both.2: Biotechnology of phototrophic organisms

- Principal organization and expression of nuclear and organellar plant genomes
- Plant and cell architecture, compartments and protein sorting
- Strategies and procedures for plant regeneration and propagation
- Plant cell, tissue and organ cultures: initiation and maintenance
- Mechanism of Agrobacterium-mediated T-DNA transfer and applications
- Plant transformation techniques and gene expression systems in plants
- Vector design and optimization, stability and analysis of transgenes
- Examples of molecular plant biotechnology: natural and novel products
- Overview of (biotechnological relevant) micro- and macroalgae and

- application
- The unicellular green algae *Chlamydomonas reinhardtii* as a model organism
 - Molecular biology of and gene technology with Cyanobacteria

Course C-Both.3: Molecular Biotechnology

- Principal mechanisms of DNA synthesis in vitro and in vivo and use of enzymes for gene cloning
- Mechanism of RNA and protein synthesis in bacteria
- Structure and function of RNA and DNA
- Regulation of gene expression in prokaryotes and eukaryotes (yeast) and use for heterologous expression of proteins
- Methods of gene cloning and target gene isolation, library construction and screening
- Theoretical ability to construct a genetically modified organism for heterologous protein production
- Theoretical ability to cultivate bacteria and yeasts

Course C-Both.4: Project seminar on construction of hosts and vectors

- Amplification of target DNA using PCR, restriction digest and vector ligation.
- Transformation of *E. coli* with plasmid, selection, monitoring of the expression success.
- Testing transgenic plants for the presence of transferred DNA
- Monitoring heterologous protein production in plants

Modulverantwortliche/r	
Weitere verantwortliche Personen	M. Pietzsch
Teilnahmevoraussetzungen	Modules of the first semester (A-Both, B-PhBT, C-Both, D-Both)
Kompetenzziele	<p>Knowledge of drug delivery routes with focus on biotech products Challenges of protein formulations Knowledge of formulation processes and additives Knowledge of drug delivery mechanisms and basic concepts of pharmacokinetics Knowledge of parenteral controlled release formulations Knowledge on posttranslational modifications of proteins in vivo Rationale behind posttranslational modification of proteins Know-how to synthetically modify proteins in vitro Knowledge on the application of biocatalysts for the synthesis of drugs Biosynthetic pathways of plant secondary metabolites Regulatory mechanisms of metabolite production Plant-derived pharmaceuticals Strategies to produce metabolites in transgenic plants Successful examples of pharmaceutical production in plants Knowledge on the application of medical devices in 'Regenerative Medicine', Clarification of terms and definitions Distinction of biomaterial classes and characteristic uses Preparation of scaffolds, hydrogels and tailored surfaces Understanding of benefits and limitations of tissue engineering</p>
Modulinhalte	<p>1. Course I-PhBT.1: Drug delivery</p> <ul style="list-style-type: none"> Characteristics of application routes Basics of pharmacokinetics Principles of protein formulation techniques Rational based formulation development / Formulation Screening Stabilization principles for proteins Controlled Release: Principles, Materials and Kinetics <p>2. Course I-Ph.2: Covalent modifications of proteins</p> <ul style="list-style-type: none"> Posttranslational modifications found in nature, e. g. glycosylation, farnesylation, phosphorylation, protein-protein cross-linking, protein splicing, oxidation, etc. Enzymes involved in posttranslational modification Bio- and chemo-catalysis for the in vitro modification of proteins, e. g. PEGylation, transglutaminase, lysyl oxidase. Application of biocatalysts in drug synthesis and enzyme technology, e. g. synthesis of semi-synthetic penicillins, synthesis of optically pure D-amino acids, regiospecific hydroxylation of steroids, etc. <p>3. Course I-PhBT.3: Advanced course on plant cell technology</p> <ul style="list-style-type: none"> Induction and subcultivation of plant cell cultures Induction and cultivation of organ cultures Selection of cell strains by cell aggregat and protoplast cloning Introduction of foreign genetic material into plant cells Expression of foreign genetic material using plant cell and hairy root cultures

- In vitro storage of plant cell culture and meristems by cryopreservation

4. Course I-PhBT.4: Biomaterials and devices

- Biomaterial classes and their general features
- Characteristics of natural and synthetic polymers
- Biomaterial device design and preparation techniques
- Biointerfaces, surface modification
- Bioreactors
- Ex vivo and in vivo tissue engineering
- Examples of devices in Regenerative Medicine

PHA.06120.01 - K-PhBT: Biopharmaceuticals

PHA.06120.01

5 CP

Modulbezeichnung	K-PhBT: Biopharmaceuticals
Modulcode	PHA.06120.01
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	<ul style="list-style-type: none"> • Pharmaceutical and Industrial Biotechnology (MA120 LP) (Master) > Pharmazie PharmaIndusBiotech.MA120, Akkreditierungsfassung gültig ab WS 2019/20 > Spezialisierung Pharmaceutical Biotechnology • Pharmaceutical and Industrial Biotechnology (MA120 LP) (Master) > Pharmazie PharmaIndusBiotech.MA120, Akkreditierungsfassung (WS 2015/16 - SoSe 2023) > Spezialisierung Pharmaceutical Biotechnology
Modulverantwortliche/r	
Weitere verantwortliche Personen	H. Lilie
Teilnahmevoraussetzungen	Modules of the first semester (A-Both, B-PhBT, C-Both, D-Both)
Kompetenzziele	

- Knowledge of the concepts of the immune response
- Basic knowledge about organs, cells and molecules of the immune system
- Knowledge, how specific cellular and humoral immune responses are developed
- Basic knowledge about autoimmune diseases
- Basic knowledge about allergies
- Knowledge about principles of tumor immunology including knowledge about selected examples of therapeutic anti-tumor antibodies
- Knowledge about principles of vaccine development: selected examples from human and veterinary medicine
- Basic knowledge about production/ selection and characterization of therapeutic mono-clonal antibodies and recombinant antibodies
- Overview of the different types of monoclonal antibodies (mAbs)
- Knowledge of the targets for mAbs
- Knowledge of the PK and PD characteristics of mAbs
- Insight into mAbs under clinical development
- Insight into the currently approved mAbs
- Understanding of antibody production: polyclonal antibodies from mice, monoclonal antibodies from hybridoma cells, recombinant antibodies from bacteria
- Understanding of antibody action: specificity, affinity, avidity
- Understanding the background and basics of different immunological tests: ELISA, Western blot and hemagglutination test
- Understanding the production (phages, bacteria) and physical (Western blot) and functional (ELISA) characterization of different formats of recombinant antibodies: nanobodies, scFv.
- Diseases relevant for DNA therapy
- Functional aspects of therapeutic DNA
- Delivery systems for DNA
- Current therapy strategies

Modulinhalte	<p>Course K-PhBT.1 Vaccines, Immunology</p> <ul style="list-style-type: none"> • Basic immunology about innate and specific immune response: Organs, cells and molecules of the immune system • Immune cell differentiation, B- and T-lymphocytes, development of the antibody and TCR repertoire • Interaction between cells and molecules in the immune system to develop specific humoral and cellular immune responses • Failures of the immune system: Basics of allergy and autoimmune disease • Basics of tumor immunology • Vaccines in application and in development • Antibodies for therapy and diagnosis <p>Course K-PhBT.2: Clinical development of monoclonal antibodies</p> <ul style="list-style-type: none"> • Basics of immunology • Technical and methodical basics of production/selection of monoclonal antibodies by classical methods and advanced modern technologies
---------------------	---

- The selection of monoclonal recombinant antibodies of different formats by Phage Display, Screening
- Production of monoclonal antibodies in CHO cells including optimization of cell lines, cultivation, media, scale up as well as purification strategies and methods.
- Plant-based antibody production is generally explained with a specific focus to expression enhancement, purification tags and glycan-engineering.
- Mechanisms of action of therapeutic antibodies
- Antibody optimization wrt pharmacokinetical half-life extension, ADCC and CDC
- Development of therapeutic anti-tumour antibodies
- Approval and necessary tests to perform phase I, II and II trials.
- Bleeding of immunized mice, production of sera, characterization by ELISA and Western blot
- Observation of hybridoma cultures, harvest of supernatants, functional characterization by ELISA and Western blot
- Production of specific display phages, nanobodies and scFv in E. coli, physical
- Characterization by Western blot and functional characterization by competitive ELISA
- Characterization of potentially neutralizing anti H5N1 antibodies in an hemagglutination test with plant-derived Virus-Like-Particles (VLPs)

Course K-PhBT.3: DNA for gene therapy

- DNA therapy: monogenic diseases, cancer
- Therapeutic DNA: structure, preparation, quality control, biological requirements
- Delivery systems: viral, liposomes, others; advantages/disadvantages
- Experimental test systems, cell culture, animal model
- Current therapy protocols

Modulverantwortliche/r	
Weitere verantwortliche Personen	W. Sippl
Teilnahmevoraussetzungen	
Kompetenzziele	<ul style="list-style-type: none"> • Basic understanding of drug substances and drug targets • Knowledge of methods and illustrative examples of drug target identification and validation - Basic understanding of the connection between molecular and clinical effects of drug substances • Knowledge on enzyme classes and mechanisms relevant for the selective synthesis of active compounds and chemicals • Basic knowledge on enzyme screening, characterization, and selectivity • Basic knowledge on enzyme and reaction engineering • Application of proteomics methods to diseases • Basic understanding of protein based diseases • Basic understanding of approaches to diagnose protein based diseases with focus on neurological disorders • Knowledge of the basic concepts of Computational Biology and Bioinformatics • A first and transparent introduction in comparative modeling and molecular dynamics simulations • Concepts of analyzing proteins/drug targets in 3D • Principles of modeling biological data
Modulinhalte	<p>Course B-PhBT.1: General aspects of drug target identification and validation</p> <ul style="list-style-type: none"> • Definition and characteristics of drug substances • Definition and characteristics of molecular drug targets • Interaction of drug substances and drug targets • Propagation of molecular drug effects • Methods and techniques for the identification and validation of drug targets • Correlation and causality of molecular and clinical drug effects <p>Course B-PhBT.2: Biocatalysis for drug and chemical syntheses</p> <ul style="list-style-type: none"> • What are the benefits of biocatalysis? • Enzyme classes and their relevance for the biocatalytic production of active compounds and chemicals • Basic molecular mechanisms of enzyme catalysis • Screening for suitable enzyme activities • Enzyme purification and characterization • Chirality and how it is achieved by enzymes %u2013 kinetic resolution %u2013 asymmetric synthesis • Application modes of biocatalysis %u2013 in vitro and in vivo applications • Improvement of enzyme properties <ul style="list-style-type: none"> o Directed mutagenesis o Directed evolution <ul style="list-style-type: none"> • Basics of reaction engineering and cofactor regeneration • Examples of industrial applications

Course B-PhBT.3: Protein based diseases

- General overview on diseases caused by proteins
- Protein misfolding and aggregation in neurological diseases
- Cerebrospinal fluid and blood biomarkers in neurodegenerative disorders
- Metabolic myopathies

4. Course B-PhBT.4: Protein modeling and simulation

- Introduction to Bioinformatics and comparative/homology modeling
- Introduction in sequence alignment techniques
- Analyzing protein structures
- Commonly used force fields for protein simulations
- Introduction to Molecular Dynamics
- Introduction to docking simulations

Spezialisierung Industrial Biotechnology

PHA.06112.02 - B-InBT: Introduction to Chemical Biotechnology

PHA.06112.02

10 CP

Modulbezeichnung	B-InBT: Introduction to Chemical Biotechnology
Modulcode	PHA.06112.02

Semester der erstmaligen Durchführung

Verwendet in Studiengängen / Semestern

- Pharmaceutical and Industrial Biotechnology (MA120 LP) (Master) > Pharmazie PharmaIndusBiotech.MA120, Akkreditierungsfassung gültig ab WS 2019/20 > Spezialisierung Industrial Biotechnology
- Pharmaceutical and Industrial Biotechnology (MA120 LP) (Master) > Pharmazie PharmaIndusBiotech.MA120, Akkreditierungsfassung (WS 2015/16 - SoSe 2023) > Spezialisierung Industrial Biotechnology

Modulverantwortliche/r

Weitere verantwortliche Personen

B. Junker

Teilnahmevoraussetzungen

Kompetenzziele

- Basic knowledge of natural products (terpenes, fatty acids, proteins, carbohydrates and selected alkaloids)
- Basic knowledge of daily occurring products (fibers, dyes, tensides, selected drugs, renewable resources)
- Knowledge on enzyme classes and mechanisms relevant for the selective synthesis of active compounds and chemicals
- Basic knowledge on enzyme screening, characterization, and selectivity
- Basic knowledge on enzyme and reaction engineering
- Basic knowledge of methods in top-down systems biology (-omics methods, statistics)
- Basic knowledge of methods in bottom-up systems biology (modeling and simulation of biological networks)
- Basic knowledge of the principles and objectives of metabolic engineering
- Basic knowledge of methods in metabolic engineering (gene identification, gene isolation, gene expression and its optimization)

Modulinhalte

Course B-InBT.1 Basics of organic chemistry of natural products

- Biosynthetic basic organic reactions
- Terpenes, Steroids: basic structural principles, biological action
- Fats, oils, waxes: basic structural principles, biological action
- Carbohydrates: Mono-, di- and polysaccharides, basic structural principles, biological action
- Amino acids, peptides, proteins: basic structural principles, biological action
- Alkaloids, heterocycles: basic structural principles, biological action
- Selected classes of other natural products (changing, e. g. polyketides).
- Fibres: cotton, wool, silk, artificial fibres
- Dyes: basic principles, natural congeners, industrial and biological importance
- Tensides: mode of action, sustainability

Course B.InBT.2: Biocatalysis for drug and chemical syntheses

- What are the benefits of biocatalysis?
- Enzyme classes and their relevance for the biocatalytic production of active compounds and chemicals
- Basic molecular mechanisms of enzyme catalysis
- Screening for suitable enzyme activities
- Enzyme purification and characterization
- Chirality and how it is achieved by enzymes %u2013 kinetic resolution %u2013 asymmetric synthesis
- Application modes of biocatalysis %u2013 in vitro and in vivo applications
- Improvement of enzyme properties

- o Directed mutagenesis
- o Directed evolution

- Basics of reaction engineering and cofactor regeneration
- Examples of industrial applications

Course B-InBT.3 Basics of systems biology

- What is systems biology?
- Definitions: Top-down and bottom-up systems biology
- High-throughput technologies (genome sequencing, transcriptomics, proteomics, metabolomics)
- Data analysis and visualization (clustering, graphs, over-representation analysis)
- Principles of mathematical modeling of biological networks

Course B-InBT.4 Basics of metabolic engineering

- Why metabolic engineering? (Process optimization, production of chemicals using renewable resources, new chemicals, chemical sourcing)
- Objects of metabolic engineering (biofuels, commodity chemicals/high value products) and associated constraints (regulatory, environmental, process, financial)
- Methods in metabolic engineering: Gene identification and sourcing (literature and genome data mining, pathway discovery), different host types (microorganisms, algae, plants)
- Engineering optimization based on metabolic modelling
- Optimization based on improvement of gene expression (codon optimization, expression levels, protein stabilization, enzymatic properties)
- Plant metabolic engineering: Potential, challenges and current progress
