Modulhandbuch Werkstofftechnik PolymerMaterialScMA120

Datum 17.04.2025

Pflichtmodule

INW.05559.04 - Polymer Engineering

INW.05559.04	10 CP
Modulbezeichnung	Polymer Engineering
Modulcode	INW.05559.04
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Beate Langer
Teilnahmevoraussetzungen	
Kompetenzziele	• The students acquire perspectives for the work as a polymer scientist or polymer engineer. • They receive the basic knowledge on processing of polymer materials and polymer testing. • They will be enabled in practical skills of processing of polymer materials. • They also learn about practical skills in mechanical and physical testing of polymer materials.
Modulinhalte	This module covers basic topics of polymer engineering. The lecture Polymer Processing gives an overview on the general aspects of polymer processing, i.e. handling of polymers from engineering point of view, the lecture Polymer Testing deepens the view on the characterization methods on macroscopic level. The lab courses Polymer processing and testing accompany the lectures and show the details of performing such experiments. Lectures: 1. Lecture Polymer Processing Basics of melt flow, extrusion, injection molding, spinning, foaming, elastomer processing, processing tires, blown film extrusion, recycling of polymer materials 2. Lecture Polymer Testing Elastic, visco-elastic and plastic deformation behavior of polymer materials and phenomenological models, quasi-static test methods of polymer materials (tensile, compression, bending), hardness measurement and test methods, charpy impact test, instrumented impact tests as methods for toughness characterizations of polymer materials, fracture mechanics concepts for polymer materials Lab Courses: 1. Polymer Processing Lab Extrusion, injection molding, elastomer processing, blown film extrusion 2. Polymer Testing Lab Characterization of elastic properties, tensile test, dynamic-mechanical analysis, bend test, ball indentation test, Charpy impact test, drop weight test, tensile impact test

PHY.05548.04 - Basics of Materials and Polymer Physics

PHY.05548.04	10 CP
Modulbezeichnung	Basics of Materials and Polymer Physics
Modulcode	PHY.05548.04
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule
Modulverantwortliche/r	
Weitere verantwortliche Personen	Dr. Karsten Busse
Teilnahmevoraussetzungen	
Kompetenzziele	• The students learn about the central physical concepts in materials science. • The students learn and train the necessary mathematical skills. • They will be enabled in planning, performing and evaluating scientific experiments using modern instrumentation. This includes error estimation and analysis, recording, evaluating and presenting measurement data and writing a report.
Modulinhalte	This module covers basic theoretical details of polymer physics and physical chemistry. The lectures Introduction to Materials Physics (1) and Mathematical and Theoretical Concepts for Polymer Science (2) act as refresher or introductional courses for the main mathematical tools and solid state properties. The Lab course Basic Physics and Physical Chemistry Lab give the students the opportunity to get an idea for the handling of characterization experiments. Lectures: 1. Introduction to Materials Physics • Atoms and bonds, crystal structures • Structure analysis: microscopy techniques • Basics of scattering (Bragg and crystal structures, wave equation, interference, structure factor) • Phase transitions and phase diagrams • Mechanical properties of solids • Thermal, optical, magnetic, electric and dielectric properties 2. Mathematical and Theoretical Concepts for Polymer Science • Mathematical tools (linear algebra, trigonometry, complex numbers, Fourier transformation, delta function) • Calculus: integration, differentiation, solving differential simple equations, applications to reaction kinetics and simple mechanical polymer models • Statistics: distribution functions (mol. weight distributions, averages and moments), data treatment, error handling, linear regression • Diffusion, Brownian motion and random walks; single-chain structure (Gaussian coil, radius of gyration) • Basics of computer simulation techniques (interaction potentials, MD vs. MC) • Introduction to quantum mechanics: Schroedinger equation, wave functions, particle in a box, harmonic oscillator, hydrogen atom, bonding Lab course - Basic Physics and Physical Chemistry Lab: 9 experiments are performed. Each experiment consists of 4 hours lab time and private study of basics, writing the protocol and evaluating the experiment. The lab includes a tutorial experiment (radioactivity) that includes an introduction into the Origin software. The list of experiments is subject to changes. Current experiments are: • Viscosity (falling ball viscometer) • Humidity (dew point hygrometer) • RLC oscillator (oscilloscope handling)

- Diffraction spectrometer (optical spectroscopy)
- Polarimeter and refractometer
- X-ray methods (spectrum of Mo tube, dosimetry)
- Vapor pressure and heat of vaporization (Clausius-Clapeyron)
- Freezing point depression
- Surface tension of liquids
- Solubility diagram of liquids (miscibility gap)

CHE.05560.04 - Polymer Engineering Science

CHE.05560.04	8 CP
Modulbezeichnung	Polymer Engineering Science
Modulcode	CHE.05560.04
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Michael Bartke
Teilnahmevoraussetzungen	
Kompetenzziele	• The students acquire perspectives for the work as a polymer engineer. • They study basics of technical/industrial polymerization processes and instrumentation • They receive the theoretical background on basic knowledge of polymerization kinetics, kinetic modeling approaches, design of polymerization reactors and industrial polymerization processes. • They acquire a basic knowledge about physical properties of polymeric materials, including composites.
Modulinhalte	This module covers advanced topics of polymer engineering. The lectures Polymer Reaction Engineering and Polymeric Materials combine the experience from lab scale to the requirements of industrial application. Lectures: 1. Polymer Reaction Engineering • Classification of polyreactions and polymerization processes • Kinetics and kinetic modeling of polymerizations and molecular weight distributions (free-radical, emulsion, coordinative polymerization) • Rheological properties of reaction mixtures • Design and dimensioning of polymerization reactors, heat removal, mixing, non-idealities • Industrial polymerization processes • Seminar topics (Material balances of ideal chemical reactors; Calculation of polymerization kinetics on selected examples; Calculation of molecular weight distributions; Application examples on dimensioning of polymerization reactor; Heat removal calculations for polymerization reactors; examples on non-ideal reactors and selectivity effects) 2. Polymeric Materials • Chemical and physical structure, Liquid/melt - solid transition: crystallization / glass transition • Mechanical behaviour: elastic deformation / rubbery-elasticity / visco-elastic behavior of polymeric solids / plastic deformation, Basics of melt flow • Thermal, optical, electrical, acoustic properties of polymers • Polymeric materials: structure, properties, applications: a) Thermoplastics (commodity polymers, polyesters/-amides, high-performance polymers) b) Elastomers c) Thermosets d) Blends and composites • Material balances of ideal chemical reactors • Calculation of polymerization kinetics on selected examples • Calculation of molecular weight distributions Examples on non-ideal reactors and selectivity effects Polymer Computer Modelling

CHE.05562.06 - Polymer Chemistry

CHE.05562.06	10 CP
Modulbezeichnung	Polymer Chemistry
Modulcode	CHE.05562.06
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Wolfgang Binder
Teilnahmevoraussetzungen	
Kompetenzziele	• The students can apply their knowledge of basic concepts of polymer synthesis, terminology, synthesis, and characterization of composition and molar mass and distributions. • They deepen their knowledge of basic concepts of organic chemistry and polymer synthesis. • They understand and can qualify the role of synthetic polymers, including the necessities and their recycling strategies in view of modern societal needs and demands. • They learn to handle chemicals safely, basics of organic/polymer synthesis, preparation and purification techniques. • They can apply analytical methods for structural and materials applications. • They learn about writing of scientific reports.
Modulinhalte	This module covers basic topics of polymer chemistry. The lecture Introduction to Macromolecules gives an overview on the general aspects of polymers and the lecture Organic Chemistry and Polymer Synthesis deepens the view on the basic synthesis and characterization methods. The lab course Basic Chemistry and Polymerization Lab allows the student to perform their first polymerization including all preparative steps like distillation of educts up to precipitation of products. Lectures: 1. Introduction to Macromolecules • General introduction and history of polymer science • General principles of polymer synthesis (step growth, chain growth, thermodynamics, kinetics, copolymerization, technical polymerizations, living polymerization) • Reactions with polymers: isomerization, grafting, crosslinking • Basics of polymer characterization: end-group titration/NMR, osmometry, viscosity, chromatography, mass spectrometry, Flory-Huggins theory, polymer additives • Microphase-separated polymers: block copolymers, thin films, amphiphilic polymers in solvents, micelles, polymer crystallization, amorphous state • Polymer materials and their bioprofiles (recycling, degradation, biological asessments) • Applications of polymers in medicine, microelectronics, in society. 2. Organic Chemistry and Polymer Synthesis • Basic principles of organic chemistry • Reaction mechanisms in organic chemistry • Principles of homogeneous and heterogeneous catalysis • Basics of solution-state NMR • Free-radical and controlled free-radical polymerizations • Living polymerizations, block copolymer synthesis • Catalytic polymerizations (Ziegler/Natta, metallocene, ROMP) • Polycondensation • Network synthesis/thermosets Lab course: 1. Basic Chemistry and Polymerization Lab

- Basic operations (distillation, recrystallization, precipitation)
- Esterification, amidation, Free-radical polymerization
- Suspension/emulsion polymerization, Resin preparation (amino-, epoxy-resins)

CHE.05565.02 - Master Thesis (M.Sc.)

CHE.05565.02			30 CP
Modulbezeichnung	Master Thesis (M.Sc.)		
Modulcode	CHE.05565.02		
Semester der erstmaligen Durchführung			
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule		
Modulverantwortliche/r			
Weitere verantwortliche Personen	Hochschullehrer der Institute Physik oder Chemie bzw. des Fachbereiches der Hochschule Merseburg		
Teilnahmevoraussetzungen	at least 75 Credit Points (75 LP)		
Kompetenzziele	• The students will be enabled to carry out independent research. • They will do literature studies and experimental work. • Finally, the students write and defend their thesis.		
Modulinhalte	This module covers the main part of the master course: The independent research work on a scientific or engineering based topic. The students must perform literature research, collect and evaluate experimental data, do their own research strategies, and finally present the results including a defense.		
Lehrveranstaltungsform	Selbständige betreute Arbeit (30 SWS)

CHE.05558.02 - Introduction to Polymer Research

CHE.05558.02		15 CP
Modulbezeichnung	Introduction to Polymer Research	
Modulcode	CHE.05558.02	
Semester der erstmaligen Durchführung		
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule	
Modulverantwortliche/r		
Weitere verantwortliche Personen	Prof. Dr. Dariush Hinderberger, Prof. Dr. Beate Langer	
Teilnahmevoraussetzungen		
Kompetenzziele	• Students will be prepared for independent research. • The project work is their first independent research experience. • The students will learn to give a scientific presentation. • They will become familiar with modern research topics in the field of polymers.	
Modulinhalte	This module covers advanced topics of polymer science and engineering. The lecture Polymer Colloquium is a ring lecture with local and guest lecturer presenting up to date information on their field of interest. The project work is the first way to perform an independent research at university or industry. Lectures: 1. Polymer Colloquium / Ring Lecture • Introduction to database and literature research (block lecture) • Modern methods and developments in polymer chemistry, physics and engineering • New material developments • Latest research activities by leading guest lecturers • Activities in the local research groups (ring lecture) • Interdisciplinary topics from adjacent fields Lab course: 1. Lab course Project Work • Participation in a research group at university or in industry • Introduction to independent research • Combining literature and experimental research • Independent preparation of the research report • Oral presentation of the results using PowerPoint

CHE.05561.04 - Polymer Physical Chemistry

CHE.05561.04	10 CP
Modulbezeichnung	Polymer Physical Chemistry
Modulcode	CHE.05561.04
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Dariush Hinderberger
Teilnahmevoraussetzungen	
Kompetenzziele	• The students obtain basics of the physical chemistry of polymers and their characterization methods. • The overview of analytical techniques for polymers enables the students for their practical application. • They learn to perform basic polymer analyses using different techniques. • Finally, they improve their capabilities in writing of scientific reports.
Modulinhalte	This module covers basic topics of polymer physical chemistry. The lectures Instrumental Analytics of Polymers, Physical Chemistry and Polymer Characterization give an overview over the broad spectrum of characterization methods from different approaches. The lab courses Instrumental Analytics of Polymers Lab and Polymer Characterization Lab accompany the lectures and show the examples of the different characterization methods. Lectures: 1. Instrumental Analytics of Polymers • Basic principles of analytical chemistry • Statistical treatment of analytical data • Special chromatographic techniques for the investigation of polymers and polymer additives • Principles and instrumental parameters in molecule spectroscopy (IR- and Raman spectroscopy) • Thermal analytical methods for the characterization of chemical and physical properties of polymers 2. Physical Chemistry • Phenomenological thermodynamics: Gibbs free energy, enthalphy, chemical potentials • Chemical and phase equilibrium, thermodynamics of mixtures • Chemical kinetics • Basics of statistical thermodynamics 3. Polymer Characterization • Determination of molecular masses and distributions • Thermodynamics of polymer solutions, colligative properties • Viscosity and diffusion • DSC, DMA, TMA • Principles of chromatography • Characterization of non-linear polymers • Microstructure analysis by NMR • Electrospray GC-MS, MALDI-TOF • End-group titration Lab courses: 1. Instrumental Analytics of Polymers Lab e.g. • Extraction of additives and analysis of extracts and residual monomers by GC/MS • Elastomer characterization by TGA

- Qualitative analysis of polymers and copolymers by FTIR spectroscopy (MIR or NIR)
- Mn of polymers by vapour pressure osmometry or membrane osmometry

2. Polymer Characterization Lab e.g.

- static light scattering
- Dynamic light scattering
- Wide-angle X-ray scattering
- CMC determination
- Gel permeation chromatography (GPC/SEC)
- End-group titration
- Intrinsic viscosity
- Solubility of polymers
- Mass spectrometry of polymers (ESI and MALDI TOF)

PHY.05563.03 - Polymer Physics

PHY.05563.03	10 CP
Modulbezeichnung	Polymer Physics
Modulcode	PHY.05563.03
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Pflichtmodule
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Kay Saalwächter
Teilnahmevoraussetzungen	
Kompetenzziele	• The students become acquainted with the fundamental concepts of experimental polymer physics. • They learn and apply the theoretical fundamentals and the experimental physical methods used to characterize and investigate polymer materials. • They gain practical experience with basic methods in experimental polymer physics. • They will understand the properties of polymer surfaces. • They receive the knowledge on methods and technologies to modify and analyze polymer surfaces.
Modulinhalte	This module covers basic topics of polymer physics. The lectures Introduction to Polymer Physics and Polymer Surface Science give an overview over the broad spectrum of physical aspects of polymeric samples. The lab course Polymer Physical Lab accompanies the lectures and show the examples of the different characterization methods. Lectures: 1. Introduction to Polymer Physics • Structure of single chains (ideal vs. real chains, scattering, semidilute solutions and melts) • Mechanical properties of polymers (liquids vs. solids, rubber elasticity, viscoelasticity, relaxation processes in polymer melts, Debye relaxation, flow behavior, time-temperature superposition and glass transition) • Molecular structure and weight distributions (chemical structure, architecture, polymerization processes, determination of structures and molecular weights) • Microscopic models for polymer dynamics (viscosity and diffusion, Rouse model, entanglements and reptation) • Thermodynamics of solutions and melts (dilute and semidilute solutions, Flory-Huggins theory, kinetics of phase separation, block copolymers, semicrystalline polymers) 2. Polymer Surface Science • Surface vs. bulk • Surface composition and ordering • Dynamic surface processes (adsorption, desorption, diffusion) • Surface tension • Surface analysis (XPS, SIMS, SEM, AFM) • Surface modification by deposition (wet processes, dry processes, CVD, PE-CVD, PVD), polymer film growth • Surface modification and functionalization (wet and dry etching, grafting, plasma treatment) • Polymer in lithography • Technical applications for surface modification Lab course: 1. Lab course Polymer Physical Lab e.g. • Rheology/mechanical spectroscopy • DSC • Polarization microscopy

Polymer Engineering

INW.05570.04 - Polymer Engineering Focus

INW.05570.04	7 CP
Modulbezeichnung	Polymer Engineering Focus
Modulcode	INW.05570.04
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Polymer Engineering
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr.-Ing. Maik Feldmann
Teilnahmevoraussetzungen	
Kompetenzziele	• The students acquire perspectives for the work as a polymer scientist or polymer engineer. • They receive knowledge on applying polymers for different part specifications. • The advanced knowledge on elastomeric materials enables them to work in industry. • They obtain advanced knowledge on preparation and properties of elastomers. • They can use their practical skills in polymer/elastomer preparation and characterization.
Modulinhalte	This module covers advanced topics of polymer engineering. The lectures Polymers in Industry and Elastomeric Materials connect the scientific approach to polymers with the industrial requirements and development methods. The lab course Elastomeric Materials Lab accompany the lectures and show the details of industrial processes. The research seminar deepens the view on industrial projects, which cannot be performed in a lab. Lectures: 1. Polymers in Industry Overview in application areas of polymers/thermoplastics and other materials in various components with respect to the industrial background. Specification and requirements for material and processing technology. Consideration of requirements and costs, overview of typical applications in various industries such as automotive, construction, packaging, electronics, recycling, and aerospace. 2. Elastomeric Materials Structure, production, and properties of elastomeric materials; technical elastomers and their components (polymers, filler, crosslinking agents, additives), influence of additives on rheological and thermodynamic behavior, preparation of rubber mixtures, testing of elastomeric materials, damage analysis. Lab courses and Seminars: 1. Elastomeric Materials Lab Content items: compounding of rubber mixtures, vulcanization, vulcametry, determination of mechanical properties of elastomeric materials 2. Research Seminar Student presentation of research results from the literature from the polymer engineering field

INW.05571.03 - Advanced Polymer Engineering

INW.05571.03	10 CP
Modulbezeichnung	Advanced Polymer Engineering
Modulcode	INW.05571.03
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Polymer Engineering
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Mario Beiner
Teilnahmevoraussetzungen	
Kompetenzziele	• Students acquire typical knowledge for the work as a polymer engineers. • They receive advanced knowledge on processing polymer blends and composites. • They will have practical skills for processing polymer blends and composites. • Students can practically apply basic principles of advanced structure characterization techniques.
Modulinhalte	This module covers advanced methods of polymer processing (lecture 1: Processing of polymer blends and composites) and polymer characterization on macroscopic level (lecture 2: Polymer Structure and Morphology). The Lab courses Processing of polymer blends and composites and Polymer Structure and Morphology give the students the opportunity to perform their own polymer processing experiments and X-ray investigations. Lectures: 1. Processing of polymer blends and composites • Techniques of modifying of polymers, creation of blends, compounds and master batches, compatibility and incompatibility of blends, special aspects of blend technology, influence of process parameters, technology of polymer composites: nano, micro and macro composites, manufacturing by different forms of composite components (particles, lamellas, short, long and endless fibers), special aspects of composites technology 2. Polymer Structure and Morphology • Scattering techniques: basic principles & general aspects, primary scattering and interference, comparison x-rays and neutrons, radiation sources and detectors • X-ray diffraction (WAXS): typical setups, diffraction by crystals, Braggs law and Laue condition, Miller indices, Structure factor and lattice factor, scattering of amorphous materials and liquids • Small-angle X-ray scattering (SAXS): typical setups, application to semi-crystalline and self-assembled polymers, Guinier law and application to disordered systems • Imaging techniques: light microscopy, atomic force microscopy, electron microscopy techniques 1. Lab Course: Processing of polymer blends and composites Practical exercises to special aspects by processing polymer blends and composites, Polymer orientation experiments after extrusion, effect of thermal treatment 2. Lab Course: Polymer Structure and Morphology Practical exercises in imaging techniques, X-ray experiments with 1- and 2-dim detectors, AFM investigations on thin films

Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Kay Saalwächter
Teilnahmevoraussetzungen	
Kompetenzziele	• The students become familiar with recent developments and modern research topics and methods in synthesis, characterization and properties of polymers and composite materials. • They learn to give a presentation based on literature work.
Modulinhalte	This module covers advanced topics of polymer physics and chemistry with state of the art examples. New approaches from literature and other groups will be presented and discussed. The research seminar deepens the view on new approaches. Lectures: 1. Modern Concepts of Polymer and Biopolymer Synthesis Special topics in current synthetic polymer chemistry research: • Modern concepts of controlled and living polymerization techniques • Star block copolymers, dendrimers, hyper branched polymers, graft copolymers • Organic-inorganic hybrid materials • Polymerization in alternative reaction media (ionic liquids, supercritical solvents) • Click-chemistry, IPN, semi-IPN, graft polymerization • New industrially synthesized polymers (e.g., s-PS, s-PP) • Biochemical methods: enzymatic polymerizations • Modifications and degradation of biopolymers • Special analytical tools for the analysis of biopolymers • Biopolymer applications 2. Modern Physical Polymer Science Special topics in current physical polymer research: • Block copolymers and polymer nanostructures • Crystallization of polymers • Nanocomposites • Polymer dynamics • Modern scattering techniques • Polymers in electronics and optics • Principles and applications of magnetic resonance techniques Seminar: 1. Research seminar • Student presentation of research results from the literature from the fields of polymer chemistry of physics

CHE.05564.06 - Advanced Polymer Chemistry

CHE.05564.06	10 CP
Modulbezeichnung	Advanced Polymer Chemistry
Modulcode	CHE.05564.06
Semester der erstmaligen Durchführung	
Verwendet in Studiengängen / Semestern	• Polymer Materials Science (MA120 LP) (Master) > Werkstofftechnik PolymerMaterialScMA120, Akkreditierungsfassung gültig ab WS 2014/15 > Polymer Science *
Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Wolfgang Binder
Teilnahmevoraussetzungen	
Kompetenzziele	• Student gain fundamentals in advanced theoretical and practical knowledge of polymerization techniques. • They will be enabled to carry out special living/controlled and catalytic polymerizations, enzymatic and biological polymer synthesis, and preparation of polymer/drug conjugates. • They learn to use advanced characterization techniques and in vivo and in vitro testing of polymers.
Modulinhalte	This module covers advanced methods of polymer synthesis (lecture 1: Advanced Polymer Synthesis) and polymer characterization on molecular level (lecture 2: Polymer Analytics). The Lab course Polymer Synthesis Lab gives the students the opportunity to perform their own syntheses. Lecture: 1. Advanced Polymer Synthesis • Detailed description of standard polymerization techniques like living polymerization methods (CRP, LCCP, living anionic polymerization), ring opening polymerization ROP, ROMP), polymer analogous reactions for tailoring polymer properties, emulsion polymerization • Detailed description of how to achieve advanced polymeric materials, variation of polymeric architectures, e.g., synthesis of block copolymers, grafted polymers, supramolecular polymers,vitrimeric polymers, design of shape memory polymers • Polymers in energy engineering • Polymer degradation and novel recycling methodologies • Polymers and their use in microelectronics • Polymers and their application in medicine • Biopolymers, their biosynthesis and their technological use. • Description of the main analytical techniques in polymer science, with a detailed study of NMR, GPC and MS techniques, discussion of practical application of techniques to polymer molecules 2. Polymer Analytics • Description and practical experience in thermal, mechanical and stability-analysis of polymers (DSC, TGA, DTMA, melt-rheology). • NMR-spectroscopy: solution NMR, basic techniques, sensitivity, heteronuclear-NMR, basic 2D-techniques, relaxation in marcomolecules, training and discussion of chemical shift analysis, spin/spin-coupling patterns, coupling constants in relation to chemical structure, isotopic patterns and molecular weight, determination of exact chemical structures, discussion of 2D-COSY-spectroscopy and practical analysis • MS-analytical methods (MALDI-TOF; ESI-TOF; TOF/TOF) for the analytics of synthetic and biopolymers • Advanced GPC/HLPC chromatography: 2D-methods in relation to polarity and coupling techniques, influence of solvents and columns, interpretation of elution times Lab course: 1. Polymer Synthesis Lab • Independent personal execution of polymerization experiments. The

method (Ionic polymerization, Living polymerization (ATRP, NMP, LCCP)) will vary due to lab capacity.
- Multiple step polymerization techniques are performed, e.g. to obtain polymers with special magnetic and electric properties, solution properties, or general block copolymers
- Analytics of polymers (structural analytics and materials analytics such as NMR, MS-, SEC, TGA, DSC, melt-rheology, 3D printing)

Modulverantwortliche/r	
Weitere verantwortliche Personen	Prof. Dr. Kay Saalwächter
Teilnahmevoraussetzungen	
Kompetenzziele	• The students deepen their background knowledge in polymer physics. • They will be familiar with fundamental principles of soft-matter physics. • They gain experience in advanced concepts of experimental or theoretical polymer physics.
Modulinhalte	This module covers advanced experimental and theoretical details of polymer physics. Beside basic lecture (Soft Condensed Matter Physics), the students can focus on either experimental (Polymer Structure and Morphology) or more theoretical approaches (Polymer Theory). The Lab courses Advanced Polymer Physics Lab and Polymer Structure and Morphology give the students the opportunity to perform their own characterization experiments. Lectures: 1. Soft Condensed Matter Physics • Structure and dynamics of liquids (existence, pair correlation function, glass transition) • Liquid crystals (classification, structure and defects in nematics, nematic-to-isotropic phase transition, elastic properties and Fredericks-transition) • Surfactants: supramolecular structures and self-organization (micelles and membranes) • Colloidal dispersions: heterogeneous systems (Brownian motion, forces between colloids, colloidal phase transitions) • Polymers (conformations: ideal chains, rubber elasticity, introduction into semicrystalline polymers) 2a. (either) Polymer Structure and Morphology • Scattering techniques: basic principles & general aspects, primary scattering and interference, comparison x-rays and neutrons, radiation sources and detectors • X-ray diffraction (WAXS): typical setups, diffraction by crystals, Braggs law and Laue condition, Miller indices, Structure factor and lattice factor, scattering of amorphous materials and liquids • Small-angle X-ray scattering (SAXS): typical setups, application to semi-crystalline and self-assembled polymers, Guinier law and application to disordered systems • Imaging techniques: light microscopy, atomic force microscopy, electron microscopy techniques 2b. (or) Polymer Theory • Conformational statistics of polymers • Flory-Huggins theory for solutions and blends • Self-consistent field theory • Random phase approximation • Polymer networks • Scaling theory of polymers • Theories of polymer dynamics

Lab courses:
1. Advanced Polymer Physics Lab

- Experiments using special techniques for physical structure details: Dielectric spectroscopy, low-field NMR, light microscopy, atomic force microscopy, X-ray scattering

2. (optional) Polymer Structure and Morphology

- Practical exercises in imaging techniques, X-ray experiments with 1- and 2-dim detectors, AFM investigations on thin films
- Practical exercises in imaging techniques
